

- Low-Light Pistol Course

Saturday, February 22 from 1300-2000

Many critical life incidents, where you may have to deploy your gun, occur in low-light or no light environments. This can be during the hours of darkness, in a dark room, or in an environment with limited ambient light.

If you carry a weapon as part of your job or as a responsible citizen, then an illumination tool is an essential component of your EDC.

This course will cover both handheld and weapons mounted light techniques. Students will learn to Navigate, Search, and Control using their particular lighting preference. Students will discover which particular light techniques and grip will work best for them.

Equipment required: Handheld light with lanyard, weapons mounted light if you have one, holster, mag pouch, 3 mags, eye and ear pro, 500 rounds of ammunition.

Come and see what you cant see.
